

## Fort Lauderdale Juvederm Dermal Filler

Plastic surgeon Dr. Wigoda uses Juvederm dermal filler for his Fort Lauderdale cosmetic surgery clients to erase facial wrinkles and facial folds. Dr. Wigoda holds personal consultations with every client to recommend the appropriate dermal filler for each patient. Inquire below today for a free consultation and see if Fort Lauderdale Juvederm by Dr. Wigoda is for you.

### What is Juvederm?

Juvederm is an FDA approved dermal filler, designed to treat moderate to severe facial wrinkles or folds. Juvederm improves the elasticity of your skin through a gel implant that includes hyaluronic acid, a naturally complex sugar that promotes a smooth, supple appearance. The gel is biocompatible and supplements the body's natural hyaluronic acid, which may diminish with age.

### How does Juvederm work?

The transparent Juvederm gel is injected with a syringe into the mid-to-deep dermis of the face. This gel will improve the appearance of the treatment area by lifting and adding volume to folds and wrinkles. The biocompatible compound is naturally absorbed into the body after about six to nine months.

### What makes Juvederm different from other dermal fillers?

Juvederm is the only hyaluronic acid filler that is FDA approved to last up to one year. Its unique manufacturing process creates a high concentration of hyaluronic acid for long lasting results and a smooth consistency that allows for easy injection in the skin.

### Is Juvederm dermal filler safe?

Yes. Juvederm was approved by the FDA in 2006 for treatment of moderate to severe facial folds and wrinkles. Side effects with Juvederm are rare, but may include redness, firmness or pain at the injection site and usually subside within seven days.

If you have any questions about Fort Lauderdale Juvederm or any other dermal filler, please feel free to contact Dr. Wigoda.
